

Buddy4Plant Photo List

125 indoor plants - one product photo each. Upload this PDF to ChatGPT (or Gemini) and paste the message from **chat-message.txt** (also shown below).

STYLE RULES (apply to every image)

Every photo must look the same: an ultra-realistic, professional e-commerce product photo in HD / 4K, square 1:1. The plant stands in a glossy round ceramic pot that is **WHITE** on the top and **MATTE BLACK** at the bottom. The pot stands on a dark wooden tabletop against a dark grey wall with soft warm golden bokeh lights in the background. Soft studio lighting, sharp focus, healthy fresh leaves, natural colours. Show the whole plant and the whole pot, centred, with some empty space around. No text, no logo, no watermark, no people, no other plants.

I have uploaded a PDF called "Buddy4Plant Photo List". It contains STYLE RULES and a numbered list of 125 plants.

Your job: create product photos for my online plant shop, **ONE** plant at a time.

For every item in the list, in order, starting from item 1:

1. Generate exactly **ONE** separate square (1:1) photorealistic image of **ONLY** that plant, following the **STYLE RULES** in the PDF exactly.
2. Only one plant in one pot per image. Never put two items together, never make a collage or a grid.
3. No text, no labels, no numbers, no logos, no watermarks anywhere in the image.
4. Below each image, write one line: #<number> - <Save as file name>
5. Then immediately continue with the next item. Do not ask me questions and do not skip items.

If you have to stop because of a limit, stop after a finished image. When I type "next", continue from the next number. If I type "redo 12", make item 12 again.

PLANT LIST

Each row: number, product name, the file name to save the image as, and what the plant must look like.
