

Buddy4Plant website - what is still left

Final check-list, 30 September 2026. All code, photos and videos have been pushed to github.com/techbuddy4plant-cell/buddy4plant (branch main, 4 commits). Everything below is what still needs your information, an account setup, or a decision before the site goes live.

1. Information or photos needed from you

Item	What is missing	Where to fix
GITI Kanpur photos	The "GITI Kanpur, Pandu Nagar" project still shows a drawing. The GITI zip had no Kanpur folder and no photo with a Kanpur sign.	Send photos, or Admin > Gardening Services > Projects > GITI Kanpur > upload
Store address, map link, hours	Store locator and footer show only "Lucknow, Uttar Pradesh, India"; opening hours are empty.	Admin > Settings
Email address	care@buddy4plant.com is shown everywhere - confirm it is a real, working inbox.	Admin > Settings
Social media links	Instagram / Facebook / YouTube / Pinterest links are sample addresses, so the footer hides them.	Admin > Settings
Offers must match	Top ticker: free delivery over Rs 999 and code WELCOME10. Product page: free shipping above Rs 499 and code Save10. Confirm which offers are real so all places say the same.	Tell me, or Admin > Settings / Coupons
Comparison table (optional)	Product-page spec table has only a Buddy4Plant column. Send the points if you want "Local Nurseries / Others" columns.	Send the points
Category artwork (optional)	"Our Categories" icons were cut from a small image and can look slightly soft on sharp screens.	Send the original design file

2. Accounts and setup before going live

Item	Why it matters	What to do
Firebase save permissions	The live Firebase rules reject writes, so admin edits are saved only in the browser that made them - visitors do not see them.	Enable Firebase Auth for the admin, update firestore.rules / storage.rules and deploy.
Admin login	Admin ID and password are written inside the code (AdminLoginPage.tsx), which anyone can read in the GitHub repo.	Change the password now; move admin login to Firebase Auth.
GitHub access token	Your personal access token is saved in plain text in the project's git remote address.	Revoke it on GitHub (Settings > Developer settings > Tokens), create a new one, and use Git Credential Manager instead.

Item	Why it matters	What to do
WhatsApp Business API	Automatic "enquiry received" message is built but needs the API connected to +91 80048 81668. Cart / product-interest reminders need a decision: Meta directly or Interakt / WATI / AiSensy.	Follow WHATSAPP-SETUP.md, add WHATSAPP_* values to .env, restart the server. Tell me which route for reminders.
Payments (Razorpay)	Checkout needs live Razorpay keys.	Add RAZORPAY_KEY_ID / RAZORPAY_KEY_SECRET / VITE_RAZORPAY_KEY_ID to .env.
Photo uploads in production	Admin uploads are saved on the server disk (uploads folder). Many hosts wipe the disk on restart.	Set ADMIN_UPLOAD_KEY and use a host with persistent storage (or move uploads to Firebase Storage).
Hosting and domain	The site runs only on your computer (localhost:3000).	Choose hosting, connect the domain, update the sitemap / APP_URL.
Privacy Policy and Terms pages	Not on the site yet; Razorpay and WhatsApp require them.	Send your policy text (or approve a draft) and I will add the pages.

3. Sample (placeholder) behaviour still in the site

Item	Current behaviour	Suggested fix
Delivery estimate	Product page pre-fills pincode 282010 (Agra) and always says delivery in 3 days.	Start empty; set real delivery days per area.
Courier on orders	Orders without a courier show "BlueDart Express Eco" and a sample tracking number / hub.	Enter the real courier and AWB for each order in Admin > Orders; remove the default.
About Us numbers	Default highlights (e.g. "18+ Landscaping Projects") show until you edit them.	Check the text in Admin > About us.
Plant Doctor page	Removed from all menus, but /plant-doctor still opens if typed directly.	Say if the page should be deleted completely.

4. Housekeeping

Item	Details	Action
_to_delete folder	Backups of old versions and unused files (about 100 MB). Not on GitHub.	Delete once you are happy with the site.
Duplicate photo folders	Top-level plant-photos and product-photos (about 62 MB) are original copies of photos already in public/ and were pushed to GitHub.	Keep as originals, or remove them from the repo to keep it smaller.
Restart after changes	Server changes (WhatsApp, uploads) need start-dev.bat to be closed and started again.	Restart after editing .env.
